Summary

# Swiss Protocol Foundations Policy Paper

## Core Thesis
Charles is initiating a structured academic and policy research project focused on the structural evolution of protocol foundations in Switzerland and their impact on decentralization. The goal is to move beyond a "ramble" into a disciplined, transparent writing process that leverages AI tools (Claude/Quad) and public repositories (GitHub) to model high-integrity research practices.

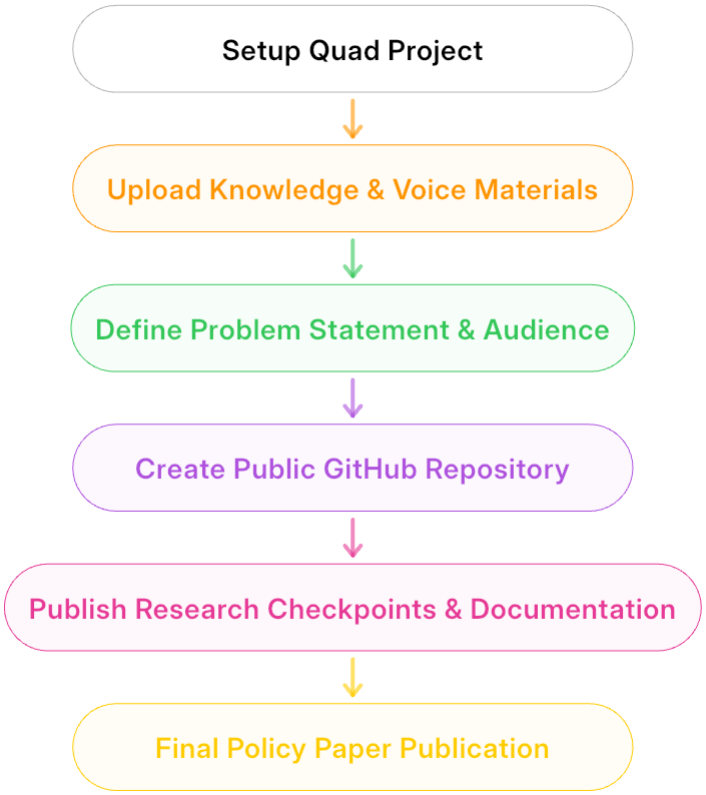

## Strategic Objectives
- **Academic Positioning:** Transitioning from previous law professor applications to a published policy paper that outlines a "path forward to decentralization."
- **Radical Transparency:** Establishing a "proof of process" by disclosing the research plan, problem statements, and supporting documentation ahead of time.
- **Tool Integration:** Utilizing a dedicated project space in Quad to house instructions, knowledge bases, and previous writing samples to maintain "voice" consistency.

## Research Focus: Swiss Protocol Foundations
The primary topic explores how protocol foundations are structured in Switzerland and the resulting implications for decentralization.

- **Current Status:** A primer exists, but the specific problem statement is not yet refined.
- **Target Audience Identification:** Needs further definition. Potential groups include:
    - Legal practitioners and committees.
    - Investors and funders.
    - Government policy makers.
    - Decentralized organizations.

## Operational Plan

### Research & Disclosure Workflow

## Open Questions & Blind Spots

- **Audience Calibration:** Which specific group (practitioners vs. policymakers) should the tone prioritize?
- **Public vs. Private Split:** Determining which "internal pieces" remain in the private repository versus what is disclosed for transparency.
- **Best Practices:** Are there existing gold standards for "open source" legal research workflows that should be emulated?

## Next Steps

- **Project Initialization:** Set up the Quad environment with specific instructions and previous articles to prime the AI on Charles's academic legal writing style.
- **Repository Setup:** Establish the GitHub structure to act as a "research tool" for both human and GPT review.
- **Audience Analysis:** Review previous papers to extract successful audience engagement patterns to apply to the Swiss foundation topic.
